Manufacturer's Flow Statement

All Natural Sprout Powder Production

1. Organic seeds are weighed in batches of 250 Kg., washed and placed in germination chambers.
2. Germination chambers receive regular sprays of water on a timed basis.
3. Germination time is visually controlled based on temperature, day length and seed variety.
4. At proper time, germinated seeds are taken to an airflow dryer and reduced to 6 to 7 percent moisture content.
5. Dried product is taken directly to milling process and milled directly to package for shipping.
6. During milling and packaging random samples are taken from each package for full microbial testing of each batch produced.
7. Each batch is individually identified with microbial test and C of A prepared for shipping.

All processing is performed at a maximum temperature of 98 F to ensure maximum enzyme activity of sprout powders.
